Continuation of 11. does NOT place the application in condition for allowance because:

Applicant argues: The Examiner contends that Kanade teaches the claimed "changeable threshold adapted to... noises included in the group of distance data points" because Fig. 12 and paragraphs [0069], [0071], [0072], and [0074] of Kanade disclose a "stricker threshold" and a "loose threshold." However, Fig. 12 and paragraphs [0069], [0071], [0072], and [0074] of Kanade are directed to line grouping, not "line fitting," as recited in claim 1.

Examiner respectfully disagrees: Kanade does teach the claimed "changeable threshold adapted to... noises included in the group of distance data points" (see fig. 12 and [0069] [0071] [0072] [0074]) ("[0069] If this is not the case, the three-dimensional sets of points (3D image data) of the processing regions are fit to a staircase model 92...[0071] any two of the extracted sets of line segments must lie at roughly the same angle (direction)...[0073] If the first through third threshold values are set loosely, the line segments that are clearly not parallel and completely unrelated line segments will be selected as line segment pairs..."); thus Kanade teaches the above limitation because "the extracted sets of lines must lie at the same angle" does involve the fitting of lines.
